linkedin.com/in/chinmaykabi

Production-focused engineer with 5+ years across Flutter, rendering systems, monetization, developer tooling, and cross-platform product infrastructure spanning mobile and web.

EXPERIENCE

Blend | Software Development Engineer II

Oct 2022 - Present

- Migrated batch rendering workflows from server-side image generation to client-side Flutter rendering, reducing export latency from ~5-6s to <2s and lowering backend load for bulk/template-based edits.
- Built headless rendering infrastructure using Flutter test/runtime environments to support backend screenshot generation and export workflows; contributed to an internal animation SDK for canvas-based motion rendering.
- Designed real-time client systems for chat, generation queues, video workflows, and AI-assisted experiences using REST APIs, Server-Sent Events, and WebSockets.
- Architected monetization systems for AI-powered products, including credits, subscriptions, paywalls, entitlement validation, and purchase state management using Flutter, RevenueCat, and Superwall.
- Drove feature parity between Flutter mobile apps and a React/TypeScript web editor across owned domains, including export flows, magic erase tooling, onboarding, paywall UX, analytics instrumentation, and video-generation workflows.
- Implemented image-processing pipelines in Flutter, including CLAHE and foreground estimation, adapting research and Python-based approaches to improve background removal and image quality.

Kreate | Mobile Application Developer

Sep 2021 - Oct 2022

- Led development of Flutter applications across buyer and seller experiences spanning Android, iOS, and web.
- Built reusable internal packages for APIs and business logic, improving code reuse across multiple Flutter projects.
- Worked on application system design and coordinated closely with backend teams to deliver product requirements.

PuStack | SDE 1

Jul 2021 - Sep 2021

- Built end-to-end text and video chat experiences in Flutter using Firebase and Agora.
- Implemented multi-platform call notifications using FCM and Pushy for chat and calling workflows.
- Prototyped an online classroom experience in Flutter for real-time communication use cases.

PUBLISHED PACKAGES

translations_cleaner

Dart CLI

- Built a Dart CLI for removing unused ARB translation keys with 27k+ monthly downloads.
- Rebuilt it from a regex-based approach to an AST-based analyzer, reducing cleanup time on the Blend codebase from about 40 seconds to under 4 seconds.

stringr

Dart Library

- Built a Unicode-safe Dart string manipulation library with 24k+ monthly downloads.

WRITING & SKILLS

Writing

[LogRocket](#), [Stream](#), [OneSignal](#), [dev.to](#)

Languages

Dart, TypeScript, JavaScript, Kotlin, Swift, Python

Frameworks

Flutter, React

Education

National Institute of Technology
Rourkela, B.Tech in Materials Engineering, 2017 - 2021
